CrewMento

Frontline Compliance & Training Operating System for Manufacturing

Manufacturing & Industrial Brief
Audit-Ready Solution 2026

Executive Overview: Manufacturing and industrial facilities face strict regulatory standards (ISO, OSHA, GMP, EHS) requiring verifiable shift compliance and continuous skill training. **CrewMento** unifies daily operational verification and AI-driven micro-learning into a single, mobile-ready platform designed specifically for plant managers, shift supervisors, safety leads, and floor operators.

1. THE DUAL-PILLAR FRONTLINE PLATFORM

CrewMento bridges the gap between workforce training and real-world execution on the plant floor. It replaces paper logbooks, lost binder records, and unverified group chats with digital, timestamped, and audit-ready workflows.

Pillar 1: Frontline Operational Compliance

- **AI-Generated Shift Checklists:** Ingest operating manuals or SOPs via Gemini AI to create Pass/Fail and photo-required checklists in seconds.
- **Dual-Layer Verification:** Assign operators to complete shift checks and designated Checkers to inspect, approve, or flag submissions.
- **Shift Flexibility:** Full support for scheduled shifts, extra shifts, and coverage assignments (*"Worked Instead Of Another User"*).
- **Live Status Tracking:** Real-time dashboard visibility across *Assigned, Submitted, Pending, Overdue, and Compliance %*.

Pillar 2: AI Micro-Learning & Certification

- **Instant Course Creation:** Upload PDFs, machine manuals, or safety guidelines to auto-generate structured training modules.
- **Automated Quizzes:** AI-generated evaluation banks testing practical floor knowledge before operators start machine runs.
- **Regulatory Certifications:** Automatically issue and maintain digital safety certificates upon course completion.
- **Mobile-First Delivery:** Micro-learning lessons accessible on floor tablets or operator mobile devices in under 5 minutes.

2. SHIFT COMPLIANCE & VERIFICATION WORKFLOW

CrewMento establishes a structured 4-step governance cycle that guarantees complete operational visibility and audit defense for plant management:

1. **Build & AI Template Generation**
   Plant Administrators create templates manually, import legacy forms via **CSV**/**Excel**, or use **Gemini AI Prompting** to auto-generate custom checklist items with pass/fail rules, mandatory comment triggers, and photo proof requirements.

2. **Assign Floor Operators & Authorized Checkers**
   Assign compliance sets to shift operators (Daily, Weekly, Monthly frequencies) and designate specific **Checkers** (Safety Officers, Quality Leads, Shift Foremen) who hold verification authority.

3. **Frontline Floor Execution & Photo Evidence**
   Operators access assigned checklists via mobile or tablet. They mark items, upload mandatory camera photo proof (e.g., pressure gauge readings, guard settings, clean hygiene stations), and submit shift logs.

4. **Checker Review, Flagging, & 1-Click Audit Export**
   Checkers inspect submissions, mark logs as **Reviewed**, or mark as **Flagged** / **Correction Requested**. Management can search by date, shift, or template and instantly export complete audit trails in **PDF, Excel, or CSV** formats.

3. KEY MANUFACTURING & INDUSTRIAL USE CASES

CrewMento is tailored to fit high-stakes industrial environments requiring zero-tolerance compliance:

DOMAIN	OPERATIONAL CHECKLISTS & SOPS	PROOF & AUDIT CONTROLS
EHS & Workplace Safety	PPE checks, Lockout/Tagout (LOTO) verification, emergency eyewash inspections, fire extinguisher status.	Mandatory photo attachment of LOTO locks & pressure gauges before line start.
Quality Assurance (QA/QC)	First-piece inspection, line clearance checklists, batch code accuracy, packaging integrity checks.	Dual-layer Checker review; flagged non-conformances sent immediately to QA leads.
Preventive Maintenance	Forklift pre-operation inspections, conveyor belt lubrication logs, machine temperature checks.	Frequency-based execution tracking (Daily/ Weekly); automated overdue flags.
Sanitation & Hygiene (GMP)	Clean-in-Place (CIP) verification, food/chemical contact surface sanitation, pest control logs.	Pass/Fail rules with required shift comments for any out-of-spec readings.

4. ROLE-BASED ACCOUNTABILITY MATRIX

CrewMento segregates permissions to enforce strict operational governance across the factory floor:

PLATFORM ROLE	PRIMARY RESPONSIBILITIES	SYSTEM CAPABILITIES
Plant Admin / EHS Lead	Governance, audit preparation, system setup	Create templates, AI prompt ingestion, assign checkers, view global branch compliance %, export PDF/Excel reports.
Checker / Supervisor	Verification, quality assurance, floor review	Review operator submissions, inspect photo evidence, approve logs, or request corrections on flagged items.
Floor Operator / Worker	Shift execution, checklist completion	Open "My Compliance", select shift type, complete Yes/No or Pass/ Fail checks, capture photos, view history.

5. STATUS LIFECYCLE & REGULATORY EXPORT OPTIONS

Every compliance item moves through a transparent, timestamped lifecycle designed for regulatory inspection:

- **PENDING** — Assigned checklist open for the active shift schedule.
- **SUBMITTED** — Completed by the operator with photo/comment evidence.
- **FLAGGED** — Non-conformance detected or correction requested by Checker.
- **REVIEWED** — Formally verified and signed off by the authorized Checker.
- **OVERDUE** — Missed shift window triggering administrative visibility.

Audit Readiness Guarantee

During unannounced ISO, OSHA, or internal corporate audits, plant managers can filter compliance records by date range, branch, shift, or employee ID and generate formatted **PDF, Excel, or CSV audit archives** in under 30 seconds.

6. ENTERPRISE INFRASTRUCTURE & AI DATA PRIVACY

- **Bring Your Own Key (BYOK) AI Architecture:** Connect your organization's Google Gemini API key. Proprietary operating manuals and schematics are processed through your isolated key and are *never* used to train public models.
- **Multi-Branch Site Isolation:** Partition multiple manufacturing plants, processing units, or sub-contractor networks under one central enterprise control panel.
- **Live Activity & Time Tracking:** Connect shift compliance directly with active operator hours, hourly progress, and shift substitution logs.
- **Automated LMS Certificates:** Issue verifiable digital safety certifications upon course completion, ensuring 100% trained headcount before operators touch equipment.
